NOTE

Our books are actually **full-blown courses** for traders. Each is designed to deal with a different aspect of trading.

These are not books that try to teach you some magic indicator. They teach you how to trade the reality of the markets.

You're looking right over Joe Ross' shoulder at **real trades** made in real markets. You are told when, why, and where the trade was made. You are shown his thinking when the trade was made. You see how, when, and why he entered a trade and how, when, and why he exited the trade.

We get letters and calls all the time telling us that our courses are worth their weight in gold, and we offer a no questions asked, **money-back guarantee** on every book still in saleable condition.

Trading Educators, Inc. (formerly Ross Trading International, Inc.) was founded in 1988, and has thousands of satisfied customers who have used the Joe Ross methods to **produce significant positive results** in the markets. Trading Educators, Inc. is registered with the Commodity Futures Trading Commission (CFTC), and the National Futures Association (NFA).

Table of Contents

| | |
|-------------------------------|----|
| ACKNOWLEDGEMENTS | 5 |

| APPENDIX C, EXERCISES..... | 471 |
| APPENDIX D, SOLUTIONS TO EXERCISES..... | 479 |
| APPENDIX E, RESOURCES..... | 511 |
| Index | 513 |

ACKNOWLEDGMENTS

I wish to thank John Barbour, without whose help this book would have taken at least another year to write. John, who is a brilliant and dedicated options trader, has taught at my seminars. He invented the terminology describing a technique you'll read about in a later chapter known as "selling losses." He collaborated on the development of my Optures and Futions seminar, and has contributed greatly to the material content of this course. He also was kind enough to write the Foreword to this manual.

My gratitude is also extended to Manfred Wurr, one of my students from Germany. Manfred has done a lot of original research on options, and has kindly written the Introduction to this manual. I appreciate his thoughtful insights into the world of options trading and was extremely happy to have him review and help in the proofing of this manual.

Much appreciation is due to the people at Roberts-Slade Inc. for their absolutely magnificent **FirstAlert** program. **FirstAlert** is the most comprehensive on-line, real-time trading package I've ever seen, and contains no fewer than **five** options models. As a trader using live data to monitor real-time price action, I have found **FirstAlert** to be without equal in its ease of use, comprehensiveness of content, and clarity of presentation.

I am thankful to Len Yates for his **OptionVue** software, which I used for the writing of this book. **OptionVue** as an educational tool for learning to trade options is excellent, and has been a part of my own learning process. My apologies go to him for any degradation of his graphics shown in this manual. **OptionVue**'s graphics are fine, but our screen capture software had a great deal of difficulty with them due to the color schemes.

Last but certainly not least, I again thank George Damusis for his **Market Detective** software. George has placed in **Market Detective** the ability to see many of the studies I like in a way that I find most useful.
